

# Aquadien™ Kit

Aquadien kit provides all the reagents needed for optimal and easy-to-perform DNA extraction for real-time PCR analysis of waterborne pathogens such as *Legionella* or *Pseudomonas aeruginosa*.

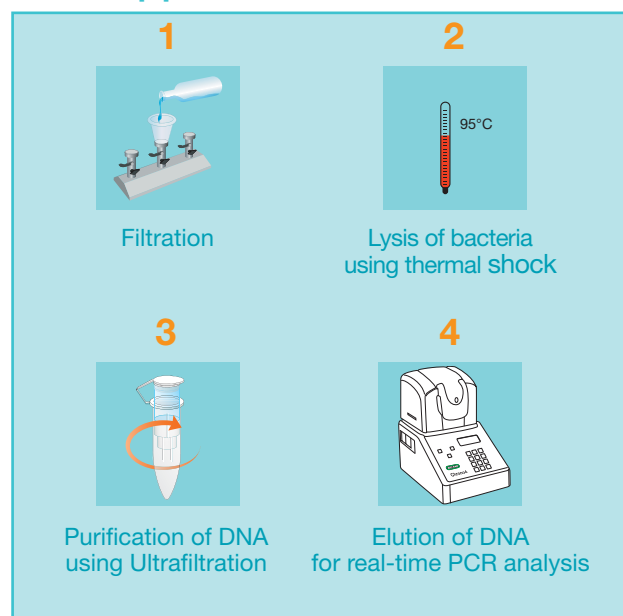

## The first step for reliable water quality monitoring

Real-time PCR is now a frequently used technology for water quality monitoring in water distribution systems.

Only reliable and high-yield DNA extraction from bacteria present in water samples, can guarantee the sensitivity and the repeatability of real-time PCR analysis.

**Aquadien kit** is based on an easy-to-use technology for optimum DNA extraction and purification from all bacteria present in water samples.
